

Your mileage deduction is only as good as your log.

If you drive for your business, the IRS standard mileage rate is worth real money: **72.5 cents a mile** for January to June 2026 and **76 cents** from July 1. At 10,000 business miles that is about **\$7,425.00**. But a deduction needs a log kept as you go, not rebuilt from memory in April.

What your log must show (IRS Publication 463)

For each business drive	The date, where you went, the business purpose, and the miles
For the year	Your business miles and your total miles (odometer on January 1 and December 31)
When	At or near the time of each drive; weekly at the latest

The easy way: Steadymile on your iPhone

1. Install and allow location "Always"	It notices every drive on its own and records it. No start button.
2. Swipe once a day	Right for business, left for personal. Add a purpose note.
3. Send me the year-end report	One tap in January: PDF and CSV, with the 2026 rate change applied.

Free to track. Reports are **\$24.99 a year, and that price never rises** (or \$79.99 once as a Founder, until April 15, 2027). No account; your drives stay on your phone and your own iCloud.
